Official Bot: KINGORI_TRADING_AI_V1

Module Roadmap

- **Module 1:** Foundations of Foreign Exchange (Currency Pairs, Pips, Lots, Spread & Leverage)
- **Module 2:** Smart Money Concepts (SMC) Strategy (H1 Trend, Structure Shift, FVG Gaps)
- **Module 3:** Installing & Configuring MetaTrader 5 (MT5 Setup & Terminal Navigation)
- **Module 4:** Deploying KINGORI_TRADING_AI_V1 (Chart Setup & Parameter Optimization)
- **Module 5:** Live Execution, Monitoring & Troubleshooting (Toolbox, Experts Log, Backtesting)

■ MODULE 1: FOUNDATIONS OF FOREX TRADING

The **Foreign Exchange (Forex)** market is the largest, most liquid financial market in the world, trading over \$7.5 trillion daily. As a Forex trader, you buy one currency while simultaneously selling another.

1.1 Currency Pairs & Market Quotations

Currencies are always traded in pairs. For instance, in **XAUUSD** (Gold vs. US Dollar) or **EURUSD** (Euro vs. US Dollar):

- **Base Currency:** The first currency listed (e.g., EUR in EURUSD or XAU in XAUUSD). It represents 1 unit.
- **Quote Currency:** The second currency listed (e.g., USD). It shows how much quote currency is required to buy one unit of the base currency.

1.2 Pips, Lots, and Position Sizing

Price movement in forex is measured in **Pips** (Percentage in Point). For major Forex pairs, 1 pip is usually the 4th decimal place (**0.0001**). For Gold (**XAUUSD**), a 1-pip movement is typically equivalent to a **0.10** price change.

Trading position sizes are defined by **Lots**:

Lot Type	Volume Size	Units of Base Currency	Approx. Pip Value (EURUSD)
Standard Lot	1.00	100,000 units	\$10.00 / pip
Mini Lot	0.10	10,000 units	\$1.00 / pip
Micro Lot	0.01	1,000 units	\$0.10 / pip

1.3 Bid, Ask, Spread & Leverage

- **Bid Price:** The price at which the broker buys from you (the selling price).
- **Ask Price:** The price at which the broker sells to you (the buying price).
- **Spread:** The difference between Ask and Bid ($\text{Spread} = \text{Ask} - \text{Bid}$). This is the broker's transaction fee.
- **Leverage:** A capital boost provided by brokers allowing you to trade larger positions with a smaller deposit. A leverage of 1:100 means \$100 controls \$10,000.

■ MODULE 2: SMART MONEY CONCEPTS (SMC) CORE STRATEGY

KINGORI_TRADING_AI_V1 is built upon institution-level trading rules known as Smart Money Concepts (SMC). Institutional traders look for market structure shifts and liquidity imbalances rather than retail indicators.

2.1 The 3-Pillar Strategy Framework

1. **Macro Trend Filter (H1 200 EMA):** The bot examines the 1-Hour chart trend using the 200 Exponential Moving Average. If the price is above the 200 EMA, only BUY signals are considered. If below, only SELL signals are taken.
2. **Market Structure Shift (MSS):** The bot monitors the last 15 bars on the 5-minute timeframe (**M5**) to spot high-probability swing highs or lows breaking, signaling an institutional reversal.
3. **Fair Value Gap (FVG) Entry:** An FVG is a 3-candle pattern where candle 1's high and candle 3's low do not overlap, leaving an unfilled market gap. The bot enters when price retraces into this gap (minimum gap size: **2.0 pips**).

Risk Management Rule

The bot limits individual trade risk to a strict percentage (default: $\text{InpRiskPercent} = 0.5\%$ of account balance), with a Risk-to-Reward ratio set at **1 : 2.5**.

■ MODULE 3: INSTALLING & SETTING UP METATRADER 5

Step 1 Download and Install MT5: Install MetaTrader 5 on your PC and log in using your Demo or Live broker account credentials.

Step 2 Locate the Data Folder: Open MT5, click **File** in the top menu bar, and select **Open Data Folder**.

Step 3 Copy the Bot File: Navigate to MQL5/Experts/ and paste your KINGORI_TRADING_AI_V1.ex5 executable file into this folder.

Step 4 Refresh Navigator: Return to MT5, right-click inside the **Navigator** window (`Ctrl + N`), and select **Refresh**. You will now see KINGORI_TRADING_AI_V1 with a solid blue hat icon.

■ MODULE 4: DEPLOYING KINGORI_TRADING_AI_V1 LIVE

4.1 Terminal Configuration

Before attaching the bot, enable global automated trading permissions:

- Click the **Algo Trading** button on the top toolbar so it shows a green play icon.
- Go to **Tools** → **Options** → **Expert Advisors** → Check "Allow Algo Trading".

4.2 Attaching to Chart & Configuring Inputs

Open an **XAUUSD** (Gold) 5-Minute (**M5**) chart. Drag and drop **KINGORI_TRADING_AI_V1** from the Navigator onto the chart. Press **F7** to open properties:

Parameter Name	Default Value	Operational Purpose
InpRiskPercent	0.5	Percentage of balance risked per trade.
InpMaxDailyLossPct	2.0	Maximum daily drawdown protection limit.
InpMaxConsecLosses	3	Maximum consecutive losses before bot pauses.
InpRewardRatio	2.5	Take Profit target ratio relative to Stop Loss.
Enable Session Time Filter	true	Restricts trading to high-volatility sessions (London/NY).
Min FVG Gap Size	2.0	Minimum gap size in pips to validate an SMC entry setup.
Tightened Max Spread Tolerance	1.5	Blocks entries if broker spread exceeds 1.5 pips.

■ MODULE 5: MONITORING, DIAGNOSTICS & BACKTESTING

5.1 Navigating the Interface & Diagnostic Tabs

Press **Ctrl + T** to open the bottom **Toolbox** window:

- **Trade Tab:** Shows current active positions, entry price, Stop Loss, Take Profit, and real-time floating profit/loss.
- **History Tab:** Displays completed past trades, closed profits, and broker execution timestamps.
- **Experts Tab:** Displays live operational logs printed by `KINGORI\_TRADING\_AI\_V1` as it processes ticks.
- **Journal Tab:** Shows system-level MT5 terminal messages and connectivity events.

5.2 Backtesting Strategy Performance

To verify strategy results on historical data:

1. Press **Ctrl + R** to open the **Strategy Tester**.
2. Select **KINGORI_TRADING_AI_V1**, set symbol to **XAUUSD**, timeframe to **M5**, and select your date range.
3. Click **Start**. Once complete, review performance across the **Overview**, **Backtest** (itemized trade history), and **Graph** tabs.

Important Operational Notice

An empty Experts tab during live session means the bot is passively listening to tick data and waiting for institutional setups to align. A solid blue hat icon in the top right corner of the chart confirms that your bot is alive and operating normally.
